Response to Amendment

1. In response to the applicants amendments received on November 10, 2005, amended claims 1, 20, 28, 36, 41, 46 have been entered as requested.

Allowable Subject Matter

2. Claims 1-48 are allowed.
3. The following is a statement of reasons for the indication of allowable subject matter:

Claims 1, 28, 36, and 46 are allowable over the prior art of record since the cited references taken individually or in combination fail to particularly disclose a coordinated universal time signal providing a common time reference to both the transmitter subsystem and a receiver subsystem, a source of delimiter signals is selected responsive to the common time reference, where the transmitting subsystem sends control information and data units over the communication channel responsive to the delimiter signals and the common time reference and, the receiver subsystem stores the data units responsive to the selected ones of the delimiter signals and the common time reference.

It is noted that the closest prior art, Shipley (US 5633742) discloses a transmitter responsive to time, divided into time frames, and that delimiters can be used between data belonging to different time frames. However, Shipley fails to disclose or render obvious the above underlined limitations as claimed.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

(a) Hirashima (US 2005005807) discloses Detection of a start delimiter causes the master device to begin writing each received data word into a receive packet buffer, which is terminated by the end delimiter of that packet.

(b) Nelson (US 6668290) discloses detecting a delimiter within a frame and writing or reading appropriately.
